**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ming Chow on 8/28/08.

The claim is to be amended as follows:

10. (Amended) A USB digital data processing device with data security protections comprises,

a random number generator;

an USB controller, wherein the USB controller receives data via interfaces from external operating systems;

an encryption unit, wherein the encryption unit receives the data from the USB controller and encrypts the data;

the encryption unit encrypts the data with a first level encryption by a first level symmetric algorithm wherein the symmetric algorithm is selected from the group consisting of DES, TDES, RC2, RC4, and RC5, and

the first level symmetric algorithm encrypts the data in accordance with a random number generated by the random number generator;

in response to the first level encryption the encryption unit further encrypts the data encrypted by the first level encryption with a second level encryption, wherein the second level encryption implements a second level asymmetric algorithm selected from the group consisting of RSA, DSA, and ECC, and

the second level asymmetric algorithm encrypts the data in accordance with a random number generated by the random number generator;

in response to the second level encryption the encryption unit further encrypts the data encrypted by the second level encryption with a third level encryption, wherein the third level encryption implements a hash algorithm selected from the group consisting of MD2, MD5, and SHA, and

the third level encryption encrypts the data in accordance with a random number generated by the random number generator; and

a memory unit wherein the memory unit stores the encrypted data by the encryption unit and

the memory unit comprises a plurality of memory areas including general area, read-only area, and reserved area, wherein

the general area receives and stores data from the external operating systems and transmits data to the external operating systems;

the read-only area stores data for modifications by the external operating system with an authentication; and

the reserved area implements Internet Protocol for data transmissions via the Internet;

the memory unit stores operating software that implements protocols of physical layer, a driving layer, an user interface layer, and an application layer.

### ***Drawings***

2. The drawings were received on 6/19/08. These drawings are acceptable.

### ***Allowable Subject Matter***

3. The following is an examiner's statement of reasons for allowance: the Examiner could find no prior art that would reasonably teach or suggest a USB flash drive capable of not only performing all three levels of encryption recited in the claim but also comprising an IP stack implementing the Internet Protocol allowing said flash drive to directly communicate with other devices on the Internet.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas Gyorfí whose telephone number is (571)272-3849. The examiner can normally be reached on 8:30am - 5:00pm Monday - Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kim Vu can be reached on (571) 272-3859. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
